PMLDL iteration Project Deliverable 1.4

Team: Pinigin Arseny, Arsenina Anna

Group: BS-4 DS-2

Link to the Colab project can be found there

Link to github there

Deliverable results:

- Documents preprocessing is implemented, data is organized into a dataset DS
- Resulting dataset is connected to the wDTW algorithm
- Different types of the embedding are added to the model: word2vec, ELMO and sentence embedding

Final results and expected outcomes:

- Accumulate different embeddings with wDTW to one DL model
- Measure and evaluate the results
- Make a conclusion
